

Day17 Assignment:

The screenshot shows a Python IDE with a file explorer on the left, a code editor in the center, and a terminal at the bottom. The file explorer lists several Python files, with 'day17.py' selected. The code editor displays a script that uses lambda functions to filter even numbers from a list and then filter positive values from that filtered list. The terminal shows the execution of the script, outputting the even numbers and the positive values.

```
1 # program to find even nos using lambda
2 numbers = [1,2,3,4,5,6,7,8,9,10]
3
4 even = list(filter(lambda x: x % 2 == 0, numbers))
5
6 print("Even Numbers:", even)
7
8 # list=[-10,9,-8,34,0]filter only positive values from lambda
9
10 lst = [-10, 9, -8, 34, 0]
11
12 positive = list(filter(lambda x: x > 0, lst))
13
14 print("Positive Values:", positive)
```

Terminal Output:

```
PS D:\SLA\Python> python day17.py
Even Numbers: [2, 4, 6, 8, 10]
Positive Values: [9, 34]
PS D:\SLA\Python>
```
