

Day18 Assignment:

The image shows a VS Code editor window with a Python file named `day18.py`. The code defines a `Student` class with an `__init__` method that takes parameters for degree, course, department, name, age, gender, dob, phone, email, address, and department. The class also has a `display` method that prints the student's details in a formatted manner. An instance of the `Student` class is created and its details are displayed.

```
1 class Student:
2     def __init__(self, name, age, gender, dob, phone, email, address,
3                     degree, course, department):
4         self.name = name
5         self.age = age
6         self.gender = gender
7         self.dob = dob
8         self.phone = phone
9         self.email = email
10        self.address = address
11        self.degree = degree
12        self.course = course
13        self.department = department
14
15    def display(self):
16        print("----- STUDENT APPLICATION FORM -----")
17        print("Name : ", self.name)
18        print("Age : ", self.age)
19        print("Gender : ", self.gender)
20        print("DOB : ", self.dob)
21        print("Phone : ", self.phone)
22        print("Email : ", self.email)
23        print("Address : ", self.address)
24        print("Degree : ", self.degree)
25        print("Course : ", self.course)
26        print("Department : ", self.department)
27
28 s1 = Student(
29     "Selvakumar K",
30     21,
31     "Female",
32     "10-08-2004",
33     "9876543210",
34     "selvakumar@gmail.com",
35     "Chennai",
36     "B.Tech",
37     "AI & Data Science",
38     "AI & DS"
39 )
40 s1.display()
```

The terminal output shows the details of the student application form:

```
PS D:\BIA\Python> python day18.py
----- STUDENT APPLICATION FORM -----
Name : Selvakumar K
Age : 21
Gender : Female
DOB : 10-08-2004
Phone : 9876543210
Email : selvakumar@gmail.com
Address : Chennai
Degree : B.Tech
Course : AI & Data Science
Department : AI & DS
```
