

Day5 Assignment

1. Properties of Set :-

- * unordered
- * Mutable
- * No duplicate values allowed
- * written using { }

Example :-

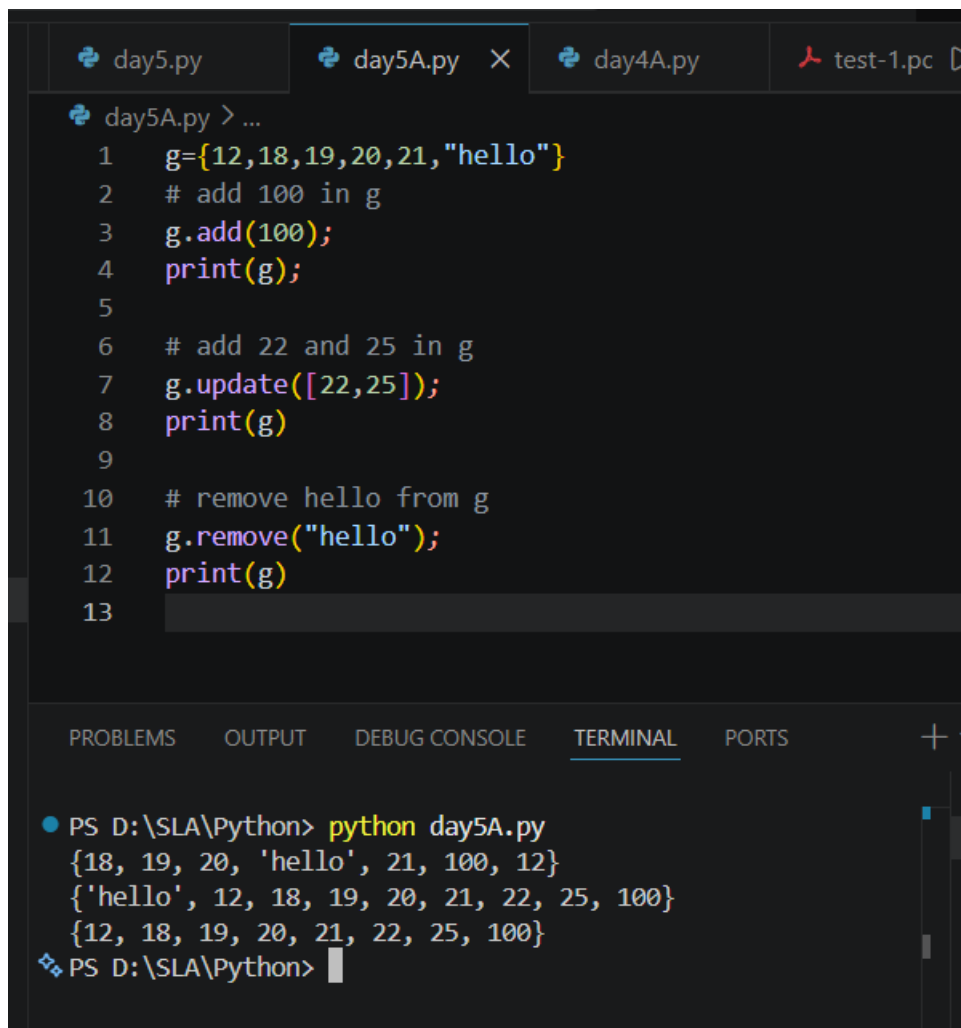

$$S = \{1, 2, 3\}$$

2. Properties of Tuple :-

- * ordered
- * immutable
- * Allows duplicate values
- * written using ()

Example :-

$$t = (1, 2, 3)$$

The image shows a Visual Studio Code editor window with four tabs: day5.py, day5A.py (active), day4A.py, and test-1.pc. The active tab, day5A.py, contains a Python script that manipulates a dictionary. The script defines a dictionary 'g' with values 12, 18, 19, 20, 21, and 'hello'. It then adds 100 to the values, updates with 22 and 25, and removes 'hello'. The output of the script is shown in the terminal panel below the editor.

```
day5A.py > ...
1  g={12,18,19,20,21,"hello"}
2  # add 100 in g
3  g.add(100);
4  print(g);
5
6  # add 22 and 25 in g
7  g.update([22,25]);
8  print(g)
9
10 # remove hello from g
11 g.remove("hello");
12 print(g)
13
```

Below the editor, the terminal panel shows the execution of the script:

```
PS D:\SLA\Python> python day5A.py
{18, 19, 20, 'hello', 21, 100, 12}
{'hello', 12, 18, 19, 20, 21, 22, 25, 100}
{12, 18, 19, 20, 21, 22, 25, 100}
PS D:\SLA\Python>
```
