

DAY 1 - Assignment

Day 1 - Assignment:

1. What is Variable:

* A variable is a name used to store data in Memory. The value of variable can change during Program execution

Example:

name = "Selvakumari"

variable-name = value,

2. What is keyword:-

* Keywords are reserved words in Python that have special meanings and cannot be used as variable names

Example of Python keywords:

if, else, for, while, break, continue, def, class,
return, import, True, false, None.

3. Python Data types:

* A data type specifies the type of value stored in variable.

1. int

2. float

3. string

4. boolean

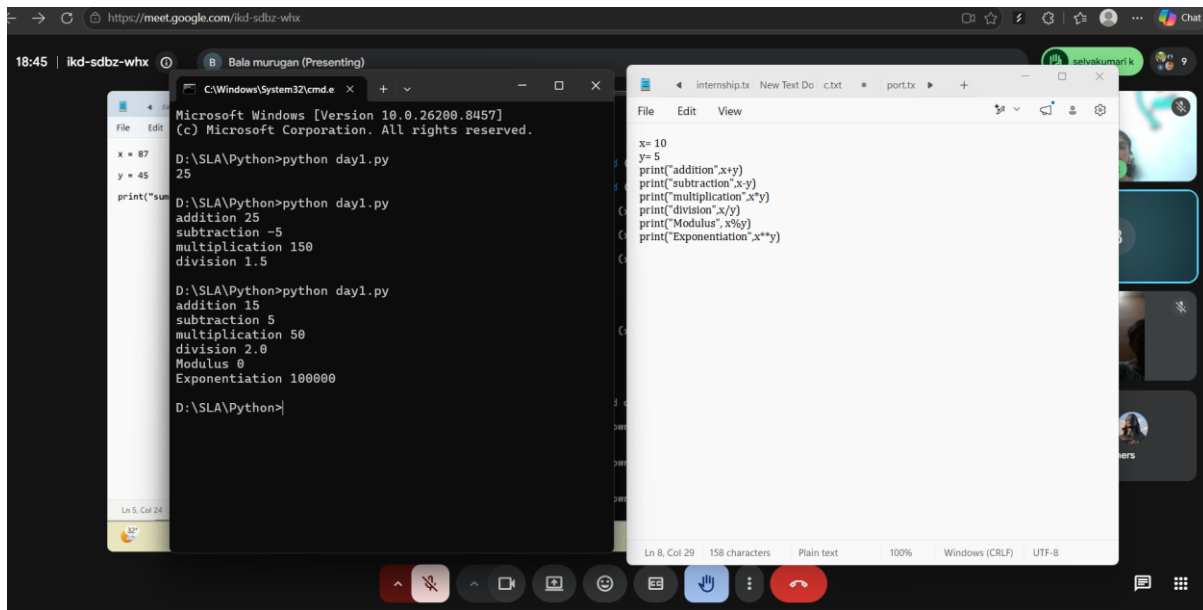

5. list

6. tuple

7. set

8. dict

4. ADD ,SUB,MULTIPLY,DIV TWO NUMBERS

The screenshot shows a Google Meet interface with a presentation window. The presentation window displays a code editor on the left and a terminal window on the right. The code editor shows a Python script named `day1.py` with the following content:

```
x = 87
y = 45
print("sum")
```

The terminal window shows the output of the Python script:

```
D:\SLA\Python>python day1.py
25
D:\SLA\Python>python day1.py
addition 25
subtraction -5
multiplication 150
division 1.5
D:\SLA\Python>python day1.py
addition 15
subtraction 5
multiplication 50
division 2.0
Modulus 0
Exponentiation 1000000
D:\SLA\Python>
```

The code editor also shows the following Python code:

```
x=10
y=5
print("addition",x+y)
print("subtraction",x-y)
print("multiplication",x*y)
print("division",x/y)
print("Modulus",x%y)
print("Exponentiation",x**y)
```
