

K. Selvakumari

09.06.2026.

Python Full stack.

1. Swap Two Numbers, without using third variable.

```
a = 10
```

```
b = 20
```

```
a = b
```

```
b = a
```

```
Print ("a" = a)
```

```
Print ("b" = b).
```

2. Display three string "Name", "IS", "James"
as "Name ** IS ** James"

```
str = ["Name", "IS", "James"]
```

```
str.join ("**", str)
```

```
Print (str).
```

3. How do you take an integer input from
the user

```
number = int(input("Enter the number));
```

4. How do you print a variable inside a
string?

Example.

```
name = "Selvakumari"
```

```
Print ("I am", name);
```

5) How do you print a string multiple times?
with an example:

Example:

```
quote = "Skill is important"
```

```
Print (quote ** 3);
```

b) How do you print a string in reverse
without using loops?

```
word = "Malayalam";
```

```
Print (word[::-1]);
```

7) Take two numbers as input and print their
sum (user input).

```
num1 = int(input("Enter your first num:"))
```

```
num2 = int(input("Enter your second num:"))
```

```
sum = num1 + num2
```

```
Print (sum)
```

8) Take three numbers and print their average (use input)

```
n1 = int(input("Enter your 1st num:"))
```

```
n2 = int(input("Enter your 2nd num:"))
```

```
n3 = int(input("Enter your 3rd num:"))
```

```
avg = (n1 + n2 + n3) / 3
```

```
print(avg)
```

9) Take a Percentage as input and print ~~the~~ with a percentage sign

```
Percentage = float(input("Enter your percentage:"))
```

```
print(Percentage, "%");
```

10. Take a Sentence and print it in uppercase, lowercase, and title case.

```
word = Setra input("Enter your sentence");
```

```
print(word.upper());
```

```
print(word.lower());
```

```
print(word.title());
```
