Python Full Stack.

1. Sum of numbers (1-5)

```
sum = 0
```

```
for i in range(1, 6):
```

```
    sum += i
```

```
print("sum", sum)
```

2. Count spaces in string:

```
text = "I love Python programming"
```

```
count = 0
```

```
for ch in text:
```

```
    if ch == " ":
```

```
        count += 1
```

```
print(count)
```

3) Print characters with index.

```
text = "Python"
```

```
for i in range(len(text)):
```

```
    print(i, text[i])
```

4) Count digits in string ("alb2c3") using .isdigit().

```
text = "alb2c3"
```

```
count = 0
```

```
for ch in text:
```

```
    if ch.isdigit():
```

```
        count = count + 1
```

```
print(count)
```

5) Reverse a String using loop.

```
text = "Python"
```

```
reverse = ""
```

```
for ch in text:
```

```
    reverse = ch + reverse
```

```
print(reverse)
```

6) Find largest number in list.

```
numbers = [3, 7, 2, 9, 5]
```

```
largest = numbers[0]
```

```
for num in numbers:
```

```
    if num > largest:
```

```
        largest = num
```

```
print(largest)
```

7) Count words

```
text = "I love Python program"
```

```
words = text.split()
```

```
Count = len(words)
```

```
.print(count)
```

8) Find common elements in two lists.

```
a = [1, 2, 3, 4]
```

```
b = [3, 4, 5]
```

```
for num in a:
```

```
    if num in b:
```

```
        print(num)
```
